

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

1.-15. (canceled)

16. (previously presented): An arrangement comprising:
a flat screen display panel having a viewing side, a back side and at least a first light-permeable layer between the viewing side and the back side;
a back light illuminating the panel from the back side of the panel;
a second light-permeable layer corresponding in at least one predetermined property to the first light-permeable layer;
a sensor detecting a luminance of the back light through the second light-permeable layer but not through the first light-permeable layer;
a back light control adjusting the luminance of the back light in accordance with the detected luminance of the sensor and a target luminance value.
17. (previously presented): The arrangement according to claim 16, wherein the first light-permeable layer and the second light-permeable layer each comprises a diffuser and a polarization film.

18. (previously presented): The arrangement according to claim 16, wherein the first light-permeable layer and the second light-permeable layer each comprises a glass and LCD fluid.

19. (previously presented): The arrangement according to claim 16, wherein the second light-permeable layer has a cross-sectional area less than a quarter of a cross-sectional area of the first light-permeable layer.

20. (previously presented): The arrangement according to claim 16, wherein a cross-sectional area of the second light-permeable layer essentially equals a luminance detecting area of the sensor.

21. (new): The arrangement according to claim 16, wherein the detected luminance is a function of at least one predetermined property of the second light-permeable layer.

22. (new): The arrangement according to claim 21, wherein the at least one predetermined property is at least one of a deterioration-dependent property and a temperature-dependent property.

23. (new): The arrangement according to claim 21, wherein the predetermined property equates at least substantially to a corresponding predetermined property of the first light-permeable layer.

24. (new): The arrangement according to claim 23, wherein the corresponding predetermined property is at least one of a deterioration-dependent property and a temperature-dependent property.
